DriSilane
ROOFING PROGRAMME

Project Profile

THE METAL CENTRE
WEDNESBURY
35,000 sq ft.

DriSilane steeled for success

Buildings housing essential trade commodities need timely roof refurbishment to ensure protection for valuable stock. Such was the case of the comprehensive and wide ranging 375,000 sq ft metal stockholding facility in Wednesbury.

To ensure the roof remained in the best possible condition, steel manufacturers' durability guidance was adopted to secure continued protection for the profiled steel sheets.

Choosing to use the fully moisture tolerant DriSilane® ReCote and RePair specifications for the roof sheet and cut edge treatments, supplemented by DriSilane® ReTrim specification for the gutters, meant all works were easily completed within budget and ahead of schedule by DriSilane® Programme experts Ellemby Contracts Ltd.

Specification:		Area
Roof:	DriSilane® ReCote	3,500 m²
○ edge treatment & sheet repaint		
Edges:	DriSilane® RePair	4725 lm
○ cut edge corrosion treatment		
Gutter:	DriSilane® ReTrim	1650 m²
○ joint & substrate refurbishment		

ReCote Roof Repaint

RePair Cut Edge Corrosion

ReTrim Gutter Refurbishment

DriSilane® Roofing Programme

The best specification, product and applicator combination for the refurbishment of profiled steel sheets, seals and gutters.

DriSilane® specifications use advanced hybrid technology that combines the elasticity of silicone and toughness of polyurethane for durable flexibility, adhesion and strength.

DriSilane® products are manufactured and tested to robust and accredited ISO quality and environmental standards by the largest independent producers of sealants in the UK.

Fully moisture tolerant, DriSilane® coatings are installed only by experienced professionals, industry recognised for their skill and expertise.

Project designed specifications using advanced coatings applied by skilled professionals
