SHEET CUT EDGE & GUTTER TREATMENT

DARLINGTON RETAIL PARK

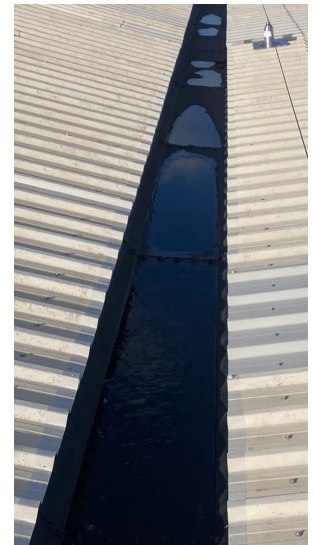

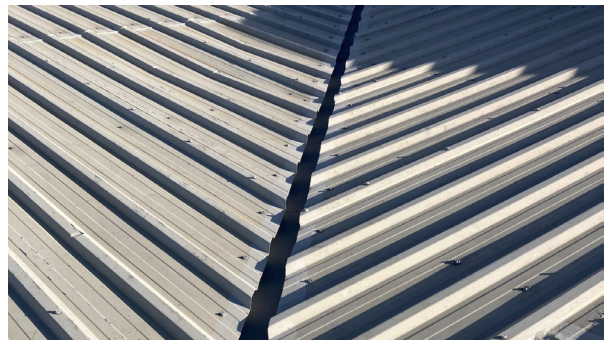

Solvent-Free RePair & ReTrim

Addressing both cut edge corrosion and gutter preservation on the roof of a modern retail unit, conveniently located at Darlington Retail Park, DriSilane® Programme experts D&D Industrial Coatings Ltd offered the most effective treatment, using solvent-free products that avoid environmentally damaging hydrocarbon and VOC vapour release.

Cut edge corrosion is seen mainly at roof sheet edges and end laps, and can arise during normal weathering. Its progression is determined by time spent in direct contact with water.

DriSilane® Repair adopts the industry standard specification to retard this progression, preventing water being held at the sheet edge and end-lap and triggering reverse side corrosion. When treated promptly such as during service maintenance, steel roofs can continue to perform for many years ahead.

Work to the roof and gutters was undertaken without internal disruption. By using damp tolerant products, the project was completed within budget and well ahead of schedule.

Roof Item:	Area	Specification
Cut Edge Corrosion	725 Lm	DriSilane® RePair
Gutter: Substrate Refurbishment	273 m ²	DriSilane® ReTrim

Installation: D&D Industrial Coatings Ltd Tel: 01606 554040

Roof: DriSilane® RePair

- Industry standard - profiled steel sheet cut edge corrosion treatment.

Gutter: DriSilane® ReTrim

- Joint seal reinstatement and surface protection of galvanised steel gutters.

DriSilane® Programme Coatings

- solvent-free, damp tolerant and manufactured in the UK using advanced hybrid polymer technology that combines the elasticity of silicone and toughness of polyurethane for durable flexibility, adhesion and strength - installed by experienced professionals, recognised for their skill and expertise.

DriSilane® RePair & ReTrim carry a 15 year warranty.
