

ARCO

TRAFFORD PARK, MANCHESTER

45,000 sq ft.

ReCote timed to perfection

As sheets age, their factory coated protection can diminish which if neglected can result in corrosion and costly roof replacement. Timely re-coating can preserve that protection for decades to come.

Such was the case of the busy 45,000 sq ft facility of expert safety partners Arco in Trafford Park, Manchester.

To ensure the roof remained in the best possible condition, project coordinators Stewart Watson of London followed steel manufacturers' long term durability guidance to secure continued protection for the profiled steel sheets.

Choosing to use the fully moisture tolerant DriSilane® ReCote specification for the roof, supplemented by DriSilane® ReTrim specification for the gutters, meant all works were easily completed within budget and ahead of schedule by DriSilane® Programme experts Tritec Building Contractors Ltd.

Specification:

Roof: **DriSilane® ReCote** 4,430 m²

- o edge treatment & sheet repaint

Gutter: **DriSilane® ReTrim** 134 m²

- o joint & substrate refurbishment

Project Installation:

Tritec Building Contractors Ltd Tel: 01268 698 299
