

23,000 sq ft
BUSINESS UNITS
CITY BUSINESS PARK
BRISTOL

Locally sourced regeneration

Local business regeneration is key to preserving city resources and older steel clad units can be successfully revived when long term maintenance schedules are observed by utilising local specialist care and attention.

Such was the case when, during refurbishment of a 23,000 sq ft unit block, centrally located in City Business Park, Bristol, it was seen that the original PVDF coated roof sheets were showing signs of wear and area spot corrosion.

The DriSilane® ReCote specification is designed to fully reinstate steel sheet and cut edge protection, and here proved to be the most effective solution to ensure the unit could be made available for a thriving business use for years to come.

Work to the roof and gutters was undertaken without internal disruption, and by using moisture tolerant products, the project was completed within budget and on schedule by DriSilane® Programme experts M&R Coatings of Bristol.

Roof Item:	Area	Specification
Aged Roof Coating / Cut Edge Corrosion	2,300 m ²	DriSilane® ReCote
Gutter: Substrate Refurbishment	150 m ²	DriSilane® ReTrim

Installation: M&R Coatings Tel: 01934 823175

Roof: DriSilane® ReCote

- Sheet cut edge treatment,
- Overall one coat, 300 micron applied DriSilane® Elite, advanced Hybrid polymer roof coating.

Gutter: DriSilane® ReTrim

- Gutter joint seal reinstatement
- Protection of galvanised steel gutters.

DriSilane® Programme Coatings
