COALVILLE LEICS.**

Specification Made to Measure

Online retailing needs logistics and warehousing that's increasingly provided by older building stock. These steel roofs often need specialist care and attention to provide continued protection for the valuable merchandise they contain.

During the refurbishment of a 250,000 sq ft logistics facility in Coalville, Leics. it was recognised that the factory installed plastisol protective coating to the roof sheets had reached its end of life and the decision was taken to reinstate it and treat all associated sheet end cut edge corrosion.

The DriSilane® ReCote specification is designed to fully reinstate profiled steel sheet protection, and proved to be the most effective solution where a speedy turnaround was required to ensure the facility was up and running to meet online demand.

Work to the roof of this project was undertaken without disruption to the internal processes, and was completed within budget and on time by DriSilane® Roofing Programme experts Kettles Ltd. of Rushden, Northants.

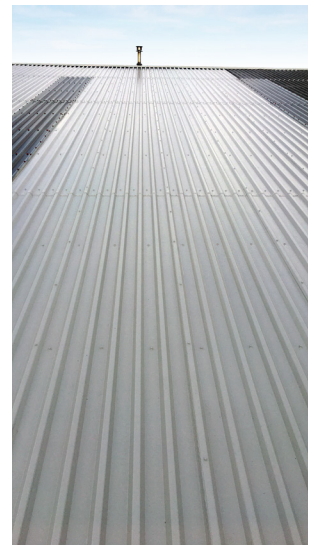

Roof Item:	Area	Specification
Aged Factory Coating Refurbishment incl. Cut Edge Corrosion Treatment	25,000 m ²	DriSilane® ReCote

Project Installation: Kettles Ltd. Rushden Tel: 01933 834040

DriSilane® ReCote

- Sheet cut edge treatment,
- Overall one coat, 300 micron applied DriSilane® Elite, advanced Hybrid polymer roof coating.

DriSilane® Programme Coatings

- engineered to be surface damp tolerant and manufactured using advanced hybrid polymer technology that combines the elasticity of silicone and toughness of polyurethane for durable flexibility, adhesion and strength.

Products are fully warranted. DriSilane® ReCote carries a 20 year warranty.

DriSilane® specifications are designed to refurbish profiled steel roofs by reinstating sheet protection, seals and gutters with advanced coating technology, installed by experienced professionals, recognised for their skill and expertise.
