

Specifications Fit for Purpose

When it comes to keeping in tip top condition, roofs need the same care and attention as people if they're to continue to perform as they should.

The DriSilane® Roofing Programme is a series of specifications designed for the refurbishment of profiled steel sheets, seals and gutters, using advanced coating technology, installed by experienced professionals, selected for their skill & expertise.

So when faced with the problem of rust affected sheet edges and gutters during refurbishment to the roof of the new sports & fitness facility at Widnes, programme experts, Group Tegula Ltd, turned to DriSilane® for the most effective solution.

Problem	Area	Treatment
Cut Edge Corrosion	840 Lm	DriSilane® RePair
Gutter Disrepair	160 m ²	DriSilane® ReTrim

Project Installation: Group Tegula Ltd. Tel: 0191 519 1133

Cut edge corrosion is a potentially serious and progressively damaging problem that affects sheet edges, flashings and end-laps.

Treatment: **DriSilane® RePair**

- adopts the industry standard specification to retard CEC progression at the sheet edge and the end-lap.

Gutter systems manage water run off by controlling drainage. Poor maintenance results in reduced capacity, leaks and substrate failure.

Treatment: **DriSilane® ReTrim**

- designed to protect joints and surfaces of structurally sound external galvanised steel gutters.

DriSilane® Programme Coatings

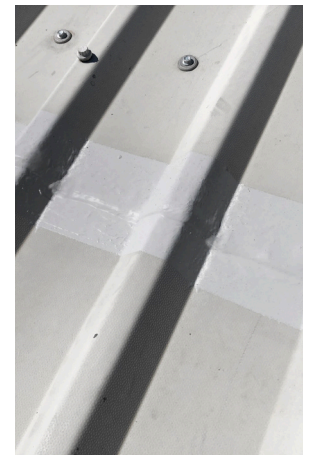

- are engineered using advanced hybrid polymer technology that combines the elasticity of silicone and toughness of polyurethane for durable flexibility, adhesion and strength.

Specification products are fully warranted - DriSilane® RePair and ReTrim carry a 15 year warranty, and roof specifications can be upgraded to full DriSilane® ReCoverly at any time.
